workflow excellent.

Multi-Safe disposal boxes

For safe disposal!

Pre-analytics

From blood collection to "Multi-Safe" disposal – Simple and safe

Safely through the day

As a renowned manufacturer of laboratory products and medical devices, we consider it our duty to provide safe disposal options for our single-use products.

As large and small waste is disposed of differently, our wide range of products offers a multitude of disposal options for our users. A variety of choice that is reflected in the different volumes, openings and many variants, even through to the final closure.

We ensure that all boxes meet the TRBA 250 (German regulations) as a minimum requirement so that we can guarantee the safe handling of the disposal box. Naturally our Multi-Safe disposal boxes also comply with international regulations, such as UN 3291 and ISO 23907.

As an independent family business, we are committed to the environment and future generations. Guided by this responsibility, we continuously optimise our actions in order to promote social growth, minimise our ecological footprint and consistently protect human health.

Our commitment to sustainable practices for our product lines is shown through actions, not merely words. When developing, manufacturing and optimising our products, we attach great importance to resource-efficient processes and products, using recyclable materials and promoting reusable systems.

The new product line of Multi-Safe REC disposal boxes made from recycled plastic (Post-Consumer Recycled = PCR) is one current example of our sustainable approach, along with other sustainable product solutions. With a recycled content of up to 64% on the entire box and a CO₂e reduction of up to 51%, it fulfils the requirement of both ISO 23907 and UN 3291.

Brand NEW

Also available as a sustainable version made from recycled plastic!

Multi-Safe vario 2000

Large opening 2.0

- Easy assembly of the lid with snap hook
- The size of the disposal opening can be adjusted by breaking out sections as required. Please break out before use.
- Day closure and final closure enables one-handed operation
- QR code on the box enables quick and direct access to the instructions for use
- Various removal and twist-off aids for needles, Luer systems and insulin pens
- Integrated stamp in the lid enables the easy and safe disconnection of the insulin pen when closing
- Compatible with commercially available trays
- Certified in line with DIN ISO 23907, UN 3291 and TRBA 250

Multi-Safe twin plus

The disposal box with added safety!

- Optimised assembly of the lid with snap hook
- Innovative lid: the day closure and final closure enable one-handed operation
- Disposal opening can be gradually enlarged by breaking out the sections. Please break out before use.
- IML label (in-mould labelling) stamped directly during production with product labelling in 9 languages
- The QR code on the box enables quick and direct access to the instructions for use
- Various removal and turning aids
- In particular, the integrated stamp for insulin pens introduces significant benefits as, by pressing down the lid, the stamp pushes the insulin pens completely into the box
- Various table and wall holders provide the option of fastening the boxes in different areas and prevent toppling (see accessories p. 24)
- Also available as version with biohazard labelling
- Certified in line with DIN ISO 23907, UN 3291 and TRBA 250

Brand NEW

Also available as a sustainable version made from recycled plastic!

Up to **64%** recycled content!
Up to **51%** CO₂e reduction!

Multi-Safe euroMatic®

Innovative design and engineering – the premium model

Up to **64%**
recycled content!
Up to **51%**
CO₂e reduction!

Automatic lid opening by **pressing**
the red button

- Square container shape
- Tough container and lid
- Anti-tip mounting with adhesive adapter and/or wall holder (see accessories on page 24)
- Innovative day and final closures allow one-handed operation of the lid (pressing the red “button” automatically opens the lid)
- Hinges on the day lid enable multiple opening/closing operations, while the secure final closure is made visible by folding out the yellow ring
- One-handed operation and large disposal opening enable fast and safe disposal of bulky objects
- Side grooves at the top edge visually confirm the closure of the container
- Side handle
- Various pull-off and twist-off aids

Multi-Safe medi

Large volume box with handle and label

- Round container shape
- The large, round footprint eliminates the need for additional holders
- Various designs (with or without handle, additional label)
- Closures have been developed so that they automatically fall backwards on opening and uncover the disposal opening
- Side grooves at the top edge visually confirm the closure of the container
- Various pull-off and twist-off aids

Multi-Safe eco

A safe and stable container for the disposal of clinical waste

- Rectangular container shape
- No additional holders needed thanks to the large footprint
- Various designs
- Multi-Safe 25 & 50 - lid-in-lid system provides variable disposal opening
- Liquid-tight final closure thanks to the adhesive strip fastened on the side of the lid
- Side grooves at the edge visually confirm the closure of the container
- Can be stacked empty and full
- Suitable for oncological waste, cytostatic drugs
- Collection and transport container for small disposal boxes

Multi-Safe steri

Huge, practical, (autoclave-)safe

- Rectangular container
- No additional holders needed thanks to the large footprint
- Safe and stable for the disposal of infectious waste
- Autoclave-safe at 121 °C to 134 °C
- Small lid melts at around 90 °C and releases the autoclave process through a grid
- The small lids can be purchased to label boxes that have already been autoclaved (77.3888.800 - yellow; other colours are possible)
- Easy to transport with handles in the bottom and top part
- Side grooves on the lid visually confirm the closure
- Can be stacked empty and full
- Collection and transport container for small disposal boxes

Handling

Safe handling of euroMatic®, steri, medi and twin plus disposal boxes

Centre the lid on the lower section of the box. The red day lid and the handle face forwards.

Simultaneously press on the opposite corners of the lid to join to the lower section of the box.

The edge of the lid must be firmly inserted around the entire circumference, until it audibly and visibly locks into place.

Safe handling of the medi disposal boxes

Centre the lid on the lower section of the box. The yellow day lid faces forwards.

Simultaneously press on the opposite corners of the lid to join to the lower section of the box.

The edge of the lid must be firmly inserted around the entire circumference, until it audibly and visibly locks into place.

Safe handling of eco/Multi-Safe disposal boxes (lid-in-lid)

Centre the lid on the lower section of the box.

Simultaneously press on the opposite corners of the lid to join to the lower section of the box.

The edge of the lid must be firmly inserted around the entire circumference, until it audibly and visibly locks into place.

Day closure

1 x lock into place
(for reuse)

Final closure

2 x lock into place
(completely sealed)

Multi-Safe

Instructions for Use

Intended use: The disposal container is intended exclusively for the disposal of pointed and sharp objects, such as needles and scalpel blades from the medical field.

Safety instructions

- Only use containers of a size that is suitable for holding the items to be disposed of.
- Store the box out of the reach of children.
- The lid must be on the container and locked into place before it is filled.
- Connect containers with the recommended adhesive adapter by rotating or hanging in the wall holder to prevent accidents.
- Do not use the day lid to press down the items to be disposed of.
- Scalpels must be disposed of in the container with particular care. If too much force is used when throwing scalpels in or if other items are placed on top, there is a risk of the angle changing and damaging the container walls or the base of the container.
- Only place items to be disposed of upright in the container.
- Do not press items into the container with force.
- Do not place any liquids in the container.
- Do not fill the box above the fill line (risk of injury!).
- Do not place hands or any other objects in the container (risk of injury).
- Do not throw the box. Do not shake the box. Do not drop the box.
- Before sealing the container, ensure that no items are projecting through the opening.
- Close the box by hand, without applying too much force.
- Do not push the box against your body (e.g. chest) for the final closure.
- Do not compress a full box.
- Use the handle.
- Before disposing of the box, check carefully that the lid is tightly closed.

ISO 23907

- One of the absorbent liners from page 25 must be used to ensure the compliant use of the box.

Disposal and the environment

- Plastics used in our products are environmentally neutral in terms of disposal.
- The plastic can be sent to landfill, as they do not release any harmful substances into the air, earth or water.
- When disposed of in incinerators, the plastics PS, PP, PC and PE serve as valuable sources of energy to maintain the temperature in the combustion chamber - the more plastic in the waste, the less heating oil is used. Burning these plastics does not release any hazardous emissions.

Recommendation:

Fill the Multi-Safe container only to about 2/3 of its volume.

Do not overfill the Multi-Safe: Risk of injury!

Material info

	Polystyrene	Polypropylene	Polycarbonate	Polyethylene
Abbreviation	PS	PP	PC	HD-PE High Density LD-PE Low Density
Optical properties	transparent, shiny surface with 90% light transmission (at 400-800 nm)	translucent, shiny surface	transparent, 88% light transmission (at 400-800 nm)	translucent to opaque, waxy surface
General mechanical properties	Low elongation at break and thermal resistance, very good electrical insulating properties, not suitable for high centrifugal accelerations	high breaking strength, resistant to stress cracking, stable form and high rigidity	very good mechanical, optical, electrical and thermal properties, can be autoclaved and sterilised	Relatively low tensile strength and surface hardness, high toughness, soft to firm, sensitive to stress cracking, water-repellent
Autoclavability	Not suitable	Products made of PP can be autoclaved at up to 121 °C without any appreciable loss of mechanical properties. The user must check whether other product characteristics are affected in terms of the desired use.	Products made of PC can be autoclaved up to 121 °C without any appreciable loss of mechanical properties. The user must check whether other product characteristics are affected in terms of the desired use.	Not suitable
Max. Continuous operating temperature* ¹	60 - 70 °C	100 - 110 °C	115 - 125 °C	HD-PE 70 - 80 °C LD-PE 60 - 75 °C
Temporary maximum operating temperature* ¹	75 - 80 °C	120 - 140 °C	125 - 140 °C	HD-PE 90 - 120 °C LD-PE 80 - 90 °C
Use at sub-zero temperatures* ²	Not well-suited	Limited suitability* ¹	down to -80 °C	Limited suitability* ¹
Density g/cm ³	1.05	0.90	1.19	HD-PE 0.95 LD-PE 0.92
Flammability	Flammable	Flammable	Flammable	Flammable
	300 - 400 °C	300 - 360 °C	380 - 450 °C	350 - 360 °C
Moisture absorption	< 0.1%	< 0.1%	0.1 - 0.3%	< 0.1%
General resistance to chemicals	PS is resistant to saline solutions, bases, non-oxidising acids, alkalis and alcohols. Benzine, volatile oils, strongly oxidising agents and flavourings attack PS, forming stress cracks.	PP is resistant to aqueous solutions of inorganic salts, acids, alkalis and to organic solvents up to 60 °C. Alcohols, esters and ketones also do not attack PP. Aromatic and halogenated hydrocarbons, oxidising substances such as concentrated nitric acid and fats, oils and waxes at high temperatures cause PP to swell.	PC is resistant to higher concentrations of mineral acids, many organic acids (e.g. carbonic acid, oleic acid and citric acid), oxidants, reducing agents, neutral and acidic saline solutions, a range of fats and oils, saturated, aliphatic and cycloaliphatic hydrocarbons and alcohols (except methanol). Bases, ammonia gas and its soluble form, and amines attack PC. PC is soluble in a range of industrial solvents. Other organic compounds like benzene, acetone and carbon tetrachloride eventually lead to expansion or swelling.	PE has a high resistance to chemicals. The chemical resistance of HD-PE is generally higher than that of LD-PE. Diluted acids, alkalis, alcohol, oil and water and saline solutions do not affect PE. Concentrated, oxidising acids, such as nitric acid and halogens have a corrosive effect.
Disposal	PS is a pure hydrocarbon and thus environmentally neutral in terms of disposal. The controlled burning of this plastic does not release any hazardous emissions.	PP is a pure hydrocarbon and thus environmentally neutral in terms of disposal. The controlled burning of this plastic does not release any hazardous emissions.	PC is a pure hydrocarbon and thus environmentally neutral in terms of disposal. The controlled burning of this plastic does not release any hazardous emissions.	PE is a pure hydrocarbon and thus environmentally neutral in terms of disposal. The controlled burning of this plastic does not release any hazardous emissions.

*¹ Suitability depends on the type of plastic used and the type of stress

*² Warning: The plastics become brittle at sub-zero temperatures. The use of products at sub-zero temperatures should be tested in advance for the relevant application. This information is intended as a guide and does not guarantee product properties.
