

S-Monovette®

The sustainable blood
collection system

40%

CO₂e reduction*

32%

less material used*

* Compared to vacuum systems

SARSTEDT

Reduce CO₂e* with the S-Monovette®!

Compared to vacuum systems, if you take 200 blood samples a day each year, you'll save as much CO₂e as 116 trees**.

Advantages of the S-Monovette® compared to vacuum systems

Our contribution towards greater ecological sustainability for every blood collection.

The CO₂e and material reduction were recorded by evaluating the weight and the materials used. To compare blood collection systems, three S-Monovettes were compared with three vacuum tubes, including their associated needles.

The result of this comparison clearly highlights the ecological advantages of using the S-Monovette® blood collection system:

- 40% less CO₂e per blood sample
- 32% less material used compared to vacuum systems
- 93% less rubber with the S-Monovette® cap
- 10% lower emissions by using PP instead of PET
- 100% certified green energy used during production

Our contribution towards greater ecological sustainability in hospitals, clinics and laboratories.

Comparison of yearly savings

Blood collection per day	Blood collection per year	Material reduction [kg]	CO ₂ e reduction [%]	CO ₂ reduction in number of trees
100	36,500	329	40%	58
200	73,000	657	40%	116
500	182,500	1,643	40%	290
1,000	365,000	3,285	40%	580

* To compare different greenhouse gases, these are converted according to their global warming potential into CO₂ equivalent (CO₂e). (German Environment Agency (Umweltbundesamt), 2023. CO₂ equivalent)

** 22 kg CO₂ / tree / year (European Environment Agency (EEA), 2021. Forests, health and climate change)

Working together for more sustainability and environmental protection

The world, and thus also our global community, are on the cusp of a major change. Climate change will continue to be a factor in the future and impact our day-to-day lives in a variety of ways. As a result, it is essential to develop environmentally friendly and ecological technologies and implement them wherever possible.

As a family-owned plastics processing company, we believe it is important to look beyond our business goals and take particular responsibility for future generations. There is currently no alternative to using non-recycled polymers in plastic injection molding to produce our high-quality medical devices and laboratory products, as our customers around the world rely

on the highest grades of purity and safety certifications to ensure optimal patient care and compliance with the stringent requirements for laboratory work. However, we aspire to live, promote and consistently expand sustainability.

Today and in the future

SARSTEDT is committed to ecological sustainability and environmental protection for present and future generations

We are certified

Our sites in Oberberg, Hemer and Rheinbach are managed according to a recognized company environmental management system in line with the ISO 14001 certification. Sustainability no longer applies only to the products themselves, but also the way in which they are produced. That is why we act in an environmentally conscious manner along our entire value chain.

CO₂ reduction

One of our primary goals is total carbon neutrality with regard to the use of fuels, propellants and electricity. We already use carbon-neutral green energy in all our sites in Germany. We are thus continuing to implement the expansion of our green energy supply to all sites worldwide.

We recycle

As a plastics processing company, recycling is a core issue for us. Even if there is still no alternative to using virgin plastic in many areas of the medical and laboratory sectors, we rely on recycling products and materials wherever possible.

We rely on renewable energy

The goal of our sustainability strategy is to progressively expand the use of renewable energy. By consistently using regenerative energy, e.g. with photovoltaic systems on the rooftops of our manufacturing facilities, we make a significant contribution to sustainability.

We practice sustainable development

As part of our product development process, we focus on sustainable materials management. With our revolutionary boxing and refilling concept for pipette tips, we offer an innovative solution for sustainable laboratory work. 70% less storage space. 64% less material.

We initiate environmental projects

With a variety of nature restoration projects, we ensure biodiversity, species conservation and the conversion of CO₂ into oxygen.

Pre-analytical workflow engineered by SARSTEDT
